

The HR, Shell

Subject: Seeking learning opportunity for May-July 2018.

Dear Sir or Madam,

I'm an audacious Petroleum Engineering junior at Rajiv Gandhi Institute of Petroleum Technology, getting ready to fuel a better world. I see coming summer of 2018 as an opportunity to learn about the various facets of oil and gas exploration and production industry.

I'm a self-motivated man with outstanding academic record and a passion for learning by doing. As a part of Science & Technical Committee, RGIPT I learn new technologies and try to find their applications for Oil & Gas Industry. I was an innovation fellow at SRISTI UNICEF Summer School on Inclusive Innovation where I worked on developing a low cost sensor based prototype to ensure optimum depth of tillage operations to get better yield of crops.

My current interests include *Reservoir Engineering* and *Data Analytics*. I have taken a keen interest in learning about Reservoir Simulation and Machine Learning.

It would be ecstatic to intern in a multi-disciplinary environment where in I can get a wholesome idea as to how all parts fit together. I appreciate your time and consideration. I would be delighted to hear from you.

Sincerely,

Girish Joshi

Pre-Final Year, B.TECH
